The UP interact with prestigious foreign universities through exchange programs for students, professors and research joint.

School of
Architecture

What does the **University gives you?**

Services

Professional Development Department promotes the insertion to the local and international labour market for students through conventions and agreements with over 1000 prestigious companies and architecture studios..

The urban campus count with modern facilities, classrooms, auditoriums, laboratories, workshops, study rooms, central library, and recreation areas.

The University offers a variety of extracurricular activities such as seminars, conferences, workshops, contests and other activities that enrich lives of students beyond classrooms and promote their learning opportunities and networking.

Why study **architecture in the UP?**

The School of Architecture at the University of Palermo, contributes to the creation of a generation of architects in order to improve people's lives, with sensitive capabilities, or cultural differences. A generation committed to society

The group of teachers and workshops for the teaching of Architecture are part of a package of services from the University, dedicated to an integrated training of each student. This helps them to have a comprehensive vision on the exercising and the professional discipline.

The teaching methodologies within the University cover the new contemporary design with emphasis on the possibilities of shapes and new techniques, both by analogue and digital media.

The work of the students of Palermo School of Architecture shows a deep commitment and understanding of the possibilities of today architecture, content, form and technology as a transformation of contemporary design.

As a result, this institution assumes an upgrade of the needs of technical preparation, intellectual, social, personal and professional of a person who will be architect in the coming years in a general context of profound renewal and collective thinking.

Why study **architecture in the UP?**

Along the whole career, the relationship student-professor is straightforward: in a climate of debate, the students rehearse, criticize, discover, ask and maintained a close contact with their professors, to generate a true knowledge of architecture.

The students are constantly in contact with the reality and participate in visits to works and industries linked to the construction, which is complemented by the possibility to apply to internships in architecture studios, participate in scholarships and international seminars and other disciplinary events of prestige.

The University has multiple conventions of internships with important studios, and national and international companies that allow our students to have its first contact with professional practice before concluding with the university training. This is the reason why when the career is over, they already have some experience in the exercise of the profession.

The UP has international links with schools as ETH, Switzerland, Delft, The Netherlands; La Salle, Spain; Ritter dos Reis, Brazil; Del desarrollo, Chile y Piloto, Colombia, among others.

At the same time, there are extracurricular workshops with the participation of prominent professionals of the country and abroad who were invited by the university, who share the latest information of what is happening in the world of architecture.

Duration and professors

Final degree.

Architecture (5 years)

Studied frequency

Five times a week

Study plan

		Technology, production and management		History of Architecture	Architecture and urbanism
1	1er. Semester	Applied Physics 1	Mathematics 1	History of Architecture 1	Integral Workshop of architecture 1
	2do. Semester	Applied Physics 2	Mathematics 2	Construcciones 1	Integral Workshop of architecture 2
2	1er. Semester	Construction 2	Analysis and design of Structures 1	History of Architecture 2	Integral Workshop of architecture 3
	2do. Semester	Construction 3	Analysis and design of Structures 2	History of Architecture 3	Integral Workshop of architecture 4
3	1er. Semester	Construction 4	Analysis and design of Structures 3	History of Architecture 4	Project workshop of Architecture 1
	2do. Semester	Construcciones 5	Analysis and design of Structures 4	History of Architecture 5	Project workshop of Architecture 2
4	1er. Semester	Legal Architecture and Professional practice 1	Production and Management 1	Theory of Architecture and the City	Project workshop of Architecture 3
	2do. Semester	Legal Architecture and Professional practice 2	Production and Management 2	Urban planning 1 Urban planning 2	Project workshop of Architecture 4
5	1er. Semester	Pupervised profesional practice		Coding and Security	Final project of the career
	2do. Semester	Pupervised profesional practice		Electives /optionals *	Final project of the career (Architecture Studio)

Degree: Architecture

Additionally, the student must take a course in Applied Computing and four levels of English language or demonstrate equivalent knowledge.

* It will complete the required number of credits.

Study Organization Plan

The courses of architecture's study are organised around three pillars:

In their courses, students are encouraged to explore the wealth of knowledge that exist in architecture and to focus on ideas and most significant works, seeking to understand their social and historical context, human needs that were satisfied and their proposal and intentions.

The career contains courses for training in construction's technology and materials, structures, construction management and planning of real estate investment and development.

The third pillar, which required more time and it is essential for the formation of the architect, take place in the Workshop of Architecture: an environment where prevails freedom of expression, where mastery in the design of the forms are achieved, and also the ability of realize them. Students develop projects complexity, investigate and integrate the knowledge of construction and structures that they have already learned in other courses.

Therefore, it is developed by shaping the design skills to create spaces and architecture and an effective personal style.

A modern university must be mature and should be able to perform an exercise in "social mobility" in activating their own environment at full speed, its essential role as a society's intellectual engine
